

### NOTES:

The Effective Projected Area (EPA) standards shown in the Load and Dimensional Data Tables on the specification sheets are designed to withstand dead loads and theoretical dynamic loads developed by variable wind speeds, as charted, with an appropriate wind gust factor under the following conditions:

- ▶ Values are nominal design 3-second gust wind speeds in miles per hour (m/s) at 33 ft (10 m) above ground for Exposure C category.
- ▶ Linear Interpolation between wind contours is permitted.
- ▶ Islands and coastal areas outside the last contour shall use the last wind speed contour of the coastal area.
- ▶ Mountainous terrain, gorges, ocean promontories, and special wind regions shall be examined for unusual wind conditions.
- ▶ This map is intended as a general guide. Check your local area for unique wind conditions.
