- ¹ Minimum of 48" from mounting surface required for upright modules.
- Photometrics tested in accordance with IESNA LM-79. Results shown are based on 25°C ambient temperature.
- Wattage shown is average for 120V through 277V input.
- Results based on relative CCT output. Performance is the same for 4000 and 5000 CCT.
- To calculate lumen output in emergency mode, multiply the battery wattage by the efficacy.
- Use multiplier tables to calculate additional options.
